

Reinforcement accelerator pedal bracket

R32

We got an offer from the owner of R32 to create something to reinforce accelerator pedal bracket and then, we produced our original reinforcement accelerator pedal bracket.

If your accelerator pedal slides when stepping, the shape of genuine bracket must be the problem.

When you step on accelerator pedal, the power are not conveyed well if the bracket is poor.

We considered if the bracket is reinforced and works properly, the treading comfort and response would be highly improved. In the result, we succeeded to enhance the both of them.
